

Bromegrass Seed Coating

Can be early ordered on Meadow or Smooth Bromegrass.

Here's how you can benefit from
using them:

FERTILIZER COATING with APRON XL

Nutriprill's® fertilizer coating is based on phosphate. Apron XL will provide excellent early seedling disease protection for optimum starts and stronger stands. The coating ratio is 70% seed and 30% coating (yellow).

IMPROVED FLOW ABILITY

Nutriprill® enhances the flow characteristics of light weight forage grasses while its nutrient package assists in the establishment of a healthy, vigorous stand.

EASE OF SEEDING

Due to its added weight, Nutriprill® coated Meadow or Smooth Bromegrass will not bridge in the seed cup and the increased seed size ensures superior control of your seeding rate and seed distribution.

Apon® XL is a registered trademark of a Syngenta group company
