STEALTH SF ALFALFA

QUICK OVERVIEW

1. With StandFast fast growth trait
2. Maximize the number of productive cuts each season
3. Big fat leaves, multileaf expression
4. Conserve moisture
5. Tall, showy growth habit

ADAPTATION

How alfalfa growers maximize the agronomic and economic advantages of planting an alfalfa with bred-in StandFast traits on their farm:

- Fast Growth trait, grows at an average of 2.0cm/day vs. 1.5cm/day for most widely grown conventional varieties.
- Harvest during the late bud stage is recommended to maximize economic yield.
- Best adapted to multiple cut harvest systems across the production zones where fall dormancy 3 or 4 varieties are normally recommended.
- No observed soil type limitations.
- Expect alfalfas with StandFast traits to reach first harvest maturity 3 to 5 days ahead of current varieties of the same dormancy.
- Equally well adapted to short, medium or medium-long rotations.
- Expect the forage quality of alfalfas of the StandFast traits to be similar to conventional varieties at the same stage of maturity.

FEATURES

FALL DORMANCY	4
WINTER SURVIVAL RATING	2.1
BACTERIAL WILT	HR
VERTICILLIUM WILT	R
FUSARIUM WILT	HR
PHYTOPHTHORA ROOT ROT	R
APHANOMYCES ROOT ROT	HR
AHTHRACNOSE	R
